

A photograph of a person's hands typing on a laptop keyboard. The laptop screen is visible in the upper right, showing a web browser with various social media or news feeds. The background is blurred, focusing attention on the hands and the laptop. The overall color palette is cool, with blues and greys, and a soft, ambient light.

Prototype Guide

2° EVALUATION

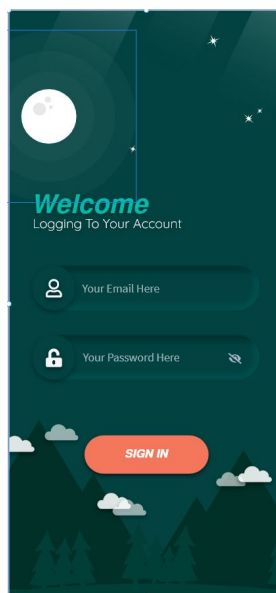

Prototype Guide

In this guide I will try to explain in a very brief way what each of the files within our prototype is about. Within the prototype of our application we find the following windows:

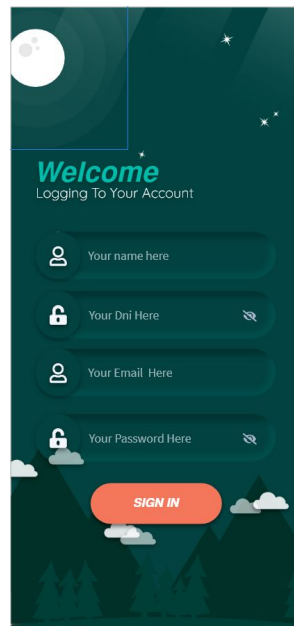

- Home window: in this window we will find the app logo.

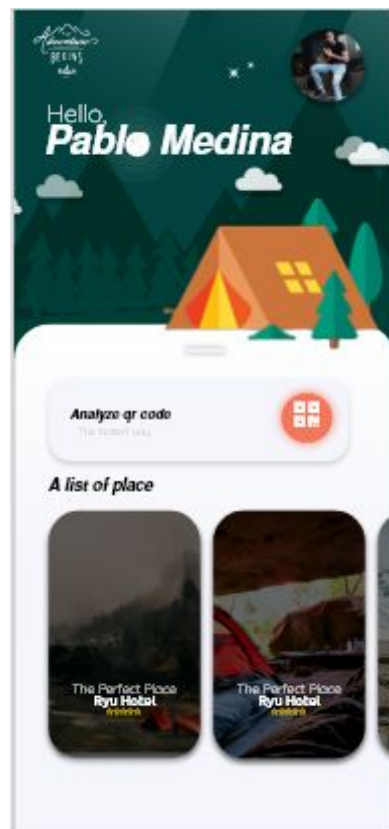

- Login Window: The App login.

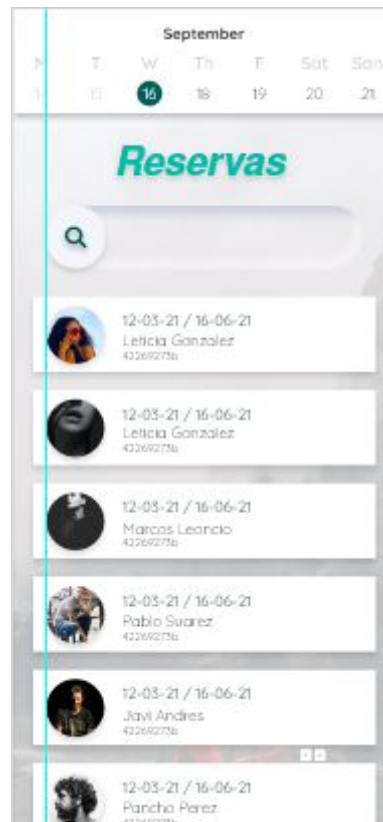

- Registration Window: In it the user can register.

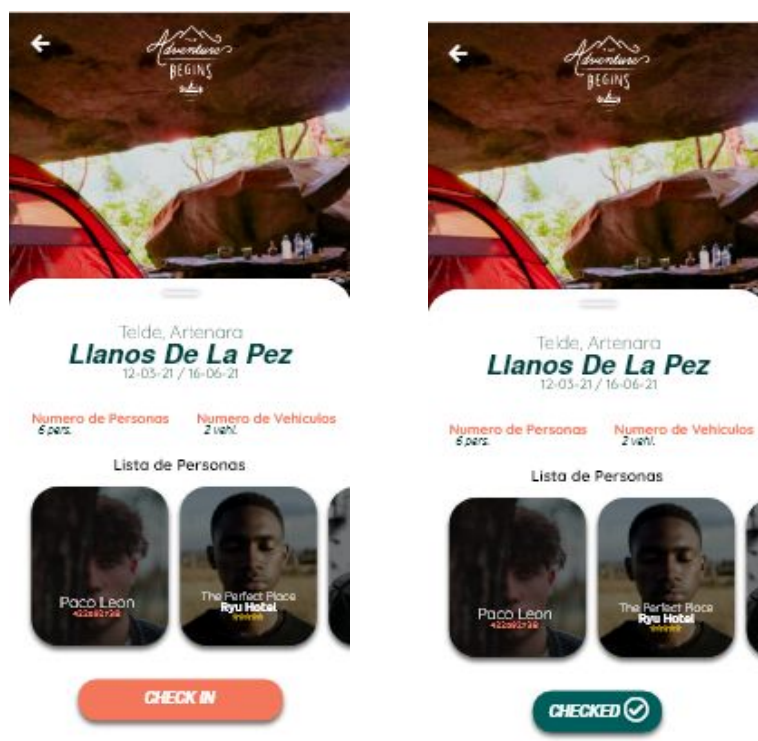

- Zones Window: In this window you can go to the QR function, and view the different zones.

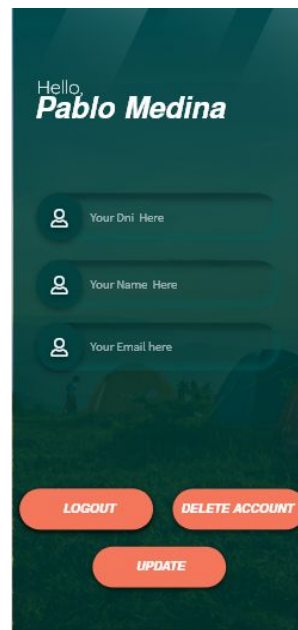

- List Window: In this window you can filter reservations by day, or by location code.

- Reservations Window: In this window you will be able to see more specific windows, together with the possibility of formalizing Check-in.

- User Profile Window: The Operator will be able to see their data more specifically.

- Windows of Updates and Creates: In these windows we simply add the different data, to then carry out an update or a creation of zones, reservations or operators.
